

ORMIS .net

ORACLE Forms to .net Migration

ORMIS-.net is a service for migration of Oracle Forms, Menus and PL/SQL libraries to Microsoft .net technology. ORMIS.net provides an automated application conversion that saves 75% to 95% of the effort of a manual migration process. The result is a C# or ASP.net application structured and coded according to Microsoft's documented best practices.

Features of ORMIS-.net:

- Oracle Forms version 4.5, 5.0, 6i and 9i
- C# and ASP.net code generation
- Support for Windows and Web Forms applications
- Migration Report generation
- Supports both Oracle and MS-SQL Server databases

The ORMIS-.net migration approach offers the following advantages:

- The percentage of the converted code is greater than the 1:1 mapping approach and of significantly higher quality because:
 - The code is transformed to a completely new architecture based on Microsoft .net best practices
 - It eliminates the Oracle style of code structures
 - The migration works at the semantic level by recognizing Oracle code patterns and transforming them into the .net code patterns.
- Sophisticated reengineering approach supporting code structures that are not merely a language constructs transformed into the desired target
- Development teams can maintain, fine-tune and evolve the migrated application using all the functionalities of Visual Studio .net.

Imex Systems Inc. provides optional post migration services like re-engineering, testing and deployment assistance.

Other ORMIS services include database migration and e-Business suite migration.

Transform your legacy ORACLE applications into modern multi-tier architectures in .net!!!

KEY FEATURES

Semantics-Oriented Migration and Best-Practices Target Architecture

Lightweight Support Libraries and 100% pure .net code

Well-Documented Migration Process

70 to 80% automation

Database Independency

Increased development productivity

Minimize time, cost and risk of the migration process

Preserve the functionality of the original application
