# ORACLE FORMS & REPORTS DEVELOPER TOOLS

Imex Systems Inc. provides a comprehensive suite of tools for management and re-engineering of Oracle Forms & Reports applications. Each tool is designed to address the specific functionality in a most efficient way. Since the ORMIT Developer tool suite is modular, you can purchase only the functionality you need and not pay for the features you do not need for your project. All tools work together with Oracle Forms development tool.

## ORMIT - Analyzer Analysis of Forms & Reports

ORMIT-Analyzer is a powerful analysis tool for analysis of existing Oracle Forms and Reports applications. This tool identifies all application elements and helps plan the migration and re-engineering projects and develop fairly accurate estimates for the migration project.

### Highlights

- Eliminates risk and surprises in the migration projects
- Reduces the effort required for migration planning

### Key Features

- Fully automated analysis
- Summary and detailed reports

## ORMIT - Manager Management of Forms & Reports Applications

ORMIT-Manager is a comprehensive tool that helps manage Oracle Forms and Reports applications.

### Highlights

- Reduce the cost of application development and management
- Simplifies application roll-out
- Simple licensing
- No limit on number of forms or applications

### Key Features

- Application and database change impact analysis
- Versioning
- Version History and restoration of old versions
- Check-in and Check-out
- Automated documentation

## ORMIT- SOA Re-engineering of Forms Applications

ORMIT-SOA is versatile tool that simplifies re-engineering of Forms applications.

### Highlights

- Helps quick implementation of SOA

### Key Features

- Application Analysis
- Simplified Web services implementation
- Creates a snap-shot of the application to help re-engineer the application.
- Application Summary
- Global edits
